

Cheyenne River Sioux

Conservation Reserve Enhancement Program (CREP)

Overview

The U.S. Department of Agriculture (USDA) and the Cheyenne River Sioux Tribe are partners in implementing a voluntary Conservation Reserve Enhancement Program (CREP) to enroll up to 1.5 million acres of agricultural land within the boundaries of the Cheyenne River Sioux Reservation in the State of South Dakota. The purpose of the CREP is to maintain and improve grassland productivity, reduce soil erosion, and enhance wildlife habitat.

Background

CREP is part of the USDA Conservation Reserve Program (CRP). This project is modeled after the Grasslands CRP, a working lands program, which protects grassland while maintaining the areas as grazing lands. The program emphasizes support for grazing operations, plant and animal biodiversity, and eligible land containing shrubs and forbs under the greatest threat of conversion. CRP participants maintain permanent, resource-conserving plant species, such as approved grasses or forbs (known as “covers”) to control soil erosion, improve water quality and develop wildlife habitat. In return, the Farm Service Agency (FSA) provides participants with rental payments and cost-share assistance.

With CREP, high-priority conservation goals are identified by the state, and then federal funds are supplemented with non-federal funds to achieve those goals.

Through the Cheyenne River Sioux CREP, federal and tribal resources are made available to program participants to voluntarily enroll in CRP for 10- to 15-year contracts.

Goals

The goals of the Cheyenne River Sioux CREP include:

- Enroll 1,500,000 acres to maintain, improve and protect grassland productivity through rotational grazing and water development(s).
- Increase grassland productivity through the use of sustainable grazing practices.
- Reduce erosion in riparian areas along water bodies through rotational grazing and cover enhancement.

Eligible Conservation Practices

CP88, Permanent Grasses and Legumes, is the only practice authorized for this CREP.

For More Information

This fact sheet is provided for informational purposes only; other restrictions or requirements may apply. Consult your local FSA office for details. For more information, contact your local service center and USDA Farm Service Agency office: farmers.gov/service-locator.

Huron, SD 57350
Phone: (605) 352-1160
Fax: (855) 243-6003

Enrollment and Eligibility Requirements

Enrollment in CRP through the Cheyenne River Sioux Tribe CREP is on a continuous basis. To be eligible, land must be owned by either the Cheyenne River Sioux Tribe or a member of the Cheyenne River Sioux Tribe and be located within the boundaries of the Cheyenne River Sioux Reservation in South Dakota. Eligible land must:

- Contain forbs or pasture upon which grazing is the predominant use
- Is located in an area historically dominated by grassland
- Provide habitat for animal and plant populations of significant ecological value
- Not be forest or woodland, or grassland with more than 5 percent tree canopy.

Participants are required to maintain and complete any maintenance/enhancements needed on land enrolled in CRP through this CREP. This includes any seeding of grasses or legumes along with applying applicable fertilizer and chemical applications. All activities are subject to a Conservation Plan.

Payments

Under the Cheyenne River Sioux CREP, eligible participants may receive the following payments:

- An annual rental payment calculated using a \$13 per acre rental rate for all enrolled land.
- A cost-share payment of up to 50 percent of the eligible reimbursable costs incurred for establishing permanent internal fencing and livestock watering facilities needed to facilitate livestock distribution.

Enrollment Options

CREP is another option under CRP that farmers and ranchers may select to enhance their land. Eligible producers may still enroll land in CRP through general or continuous signup.

Haying and Grazing

Participants may hay and graze the existing permanent cover while receiving an annual rental payment. All activities are subject to a Conservation Plan, with certain restrictions for haying during primary nesting season.
