A Note from State Executive Director Laurie Funderburk

Greetings, South Carolina Producers!

I hope your planting season is going well! As summer heats up, please be mindful of sun and heat exposure, and take precautions to be safe when outdoors. Drought is a major concern for many of our counties. There are resources available to producers who would like to learn more about drought in their area. A great resource is Ask the Expert: Understanding the U.S. Drought Monitor, a Farmers.gov blog article with climatologist Brian Fuchs that discusses the U.S. Drought Monitor, the USDA programs triggered by the Monitor data, and how the data can aid agricultural producers as they make decisions.

The nomination period for FSA County Committee (COC) Elections begins on June 15 and runs until August 1. If you or a fellow farmer are interested in serving on your local County Committee, please visit your local FSA office for more information. County Committees are a critical component of the day-to-day operations of FSA: the Committees make determinations...
on programs such as disaster assistance, make certain hiring decisions, assist with outreach, and ensure the fair and equitable administration of FSA farm programs in their counties.

Lastly, the 2022 Census of Agriculture data collection begins in November. Agriculture producers who did not receive the 2017 Census of Agriculture and do not receive other USDA surveys or censuses have until June 30 to sign up at nass.usda.gov/AgCensus to receive the 2022 Census of Agriculture. The Ag Census includes every American operation – large or small, urban or rural – from which $1,000 or more of agricultural products are produced and sold in the ag census year. A complete count, with every producer represented, is vital.

Be safe out there and thank you for all you do!

Laurie Slade Funderburk
State Executive Director

Farm Service Agency Now Accepting Nominations for Farmers and Ranchers to Serve on Local County Committees

The U.S. Department of Agriculture (USDA) Farm Service Agency (FSA) is now accepting nominations for county committee members. Elections will occur in certain Local Administrative Areas (LAA) for members. LAAs are elective areas for FSA committees in a single county or multi-county jurisdiction. This may include LAAs that are focused on an urban or suburban area.

County committee members make important decisions about how Federal farm programs are administered locally. All nomination forms for the 2022 election must be postmarked or received in the local FSA office by Aug. 1, 2022.

Agricultural producers who participate or cooperate in a USDA program and reside in the LAA that is up for election this year, may be nominated for candidacy for the county committee. A cooperating producer is someone who has provided information about their farming or ranching operation to FSA, even if they have not applied or received program benefits. Individuals may nominate themselves or others and qualifying organizations may also nominate candidates. USDA encourages minority producers, women, and beginning farmers or ranchers to nominate, vote and hold office.

Nationwide, more than 7,700 dedicated members of the agricultural community serve on FSA county committees. The committees are made up of three to 11 members who serve three-year terms. Producers serving on FSA county committees play a critical role in the day-to-day operations of the agency. Committee members are vital to how FSA carries out disaster programs, as well as conservation, commodity and price support programs, county office employment and other agricultural issues.

More Information

Producers should contact their local FSA office today to register and find out how to get involved in their county’s election, including if their LAA is up for election this year. To be
considered, a producer must be registered and sign an FSA-669A nomination form. Urban farmers should use an FSA-669-A-3 for urban county committees. The form and other information about FSA county committee elections are available at fsa.usda.gov/elections.

Election ballots will be mailed to eligible voters beginning Nov. 7, 2022. Producers can find their local USDA Service Center at farmers.gov/service-locator.

USDA touches the lives of all Americans each day in so many positive ways. In the Biden-Harris administration, USDA is transforming America’s food system with a greater focus on more resilient local and regional food production, fairer markets for all producers, ensuring access to safe, healthy and nutritious food in all communities, building new markets and streams of income for farmers and producers using climate smart food and forestry practices, making historic investments in infrastructure and clean energy capabilities in rural America, and committing to equity across the Department by removing systemic barriers and building a workforce more representative of America. To learn more, visit www.usda.gov.

---

### Gear Up for the 2022 Hurricane Season

Hurricane season is officially underway, and it lasts until November 30. The National Oceanic and Atmospheric Administration (NOAA) predicts that the 2022 hurricane season will be above normal in the Atlantic and produce 14 to 21 named storms with six to 10 hurricanes and three to six major hurricanes. Additionally, NOAA predicts that the eastern Pacific hurricane season will produce 10 to 17 named storms, with four to eight hurricanes and zero to three major hurricanes.

Take precautions to prepare and protect your family and agricultural operation.

1. **Develop an Emergency Plan** - Ensure your household and employees know your hurricane plan, including meeting points, emergency contact lists, and alternate evacuation routes in case infrastructure is damaged.

2. **Remove Debris and Secure Large Objects** - Clean out culverts, ditches, and other drainage areas, especially before and during peak hurricane season to reduce water damage. Most injuries to animals, people, or structures during a hurricane are caused by flying objects. To lessen the risk, minimize the presence of equipment, supplies, and debris that may become airborne during high winds or encountered in floodwaters.

3. **Secure Important Records and Documents** - Pre- and post-hurricane documentation is extremely important for insurance compensation and recovery assistance. You’ll want to have thorough records of damages and losses sustained on your farm as well as documentation of your cleanup and recovery efforts.
   - It is critical to document inventory of farm buildings, vehicles, equipment, and livestock before a disaster occurs. Take photos, videos, or make written lists with descriptions. Keep copies of this inventory in multiple places: computer, off-site in a safe location, and on a cloud-based server where information is transmitted and saved weekly.
4. **Know Your Insurance Options**- Regularly review your insurance policies with your agent to be sure you have adequate coverage, including flood insurance, for your facilities, vehicles, farm buildings, crops and livestock. Note, there are limitations on how soon insurance coverage will take effect. Generally, insurance policies will not cover damage if the policy was not in place before a disaster.

5. **Gather Supplies** - Have drinking water, canned food, a generator, batteries, a flashlight, and fuel available in case you lose power. For widespread outages, credit and debit cards may not work, so have cash handy.

6. **Access Real-time Emergency Information**- Download the FEMA app for free on the App Store and Google Play for safety tips on what to do before, during, and after disasters. Subscribe to the USDA’s Farm Production and Conservation [text message and email service](https://www.fsa.usda.gov/农作物) to receive real-time, local operational and recovery information from the Farm Service Agency, Natural Resources Conservation Service, and Risk Management Agency.

On farmers.gov, the [Hurricane Webpage](https://www.fsa.usda.gov/hurricane), [Disaster Assistance Discovery Tool](https://www.fsa.usda.gov/disaster), [Disaster-at-a-Glance fact sheet](https://www.fsa.usda.gov/daglance), and [Farm Loan Discovery Tool](https://www.fsa.usda.gov/loans) can help producers and landowners determine program or loan options. For assistance with a crop insurance claim, producers and landowners should contact their [crop insurance agent](https://www.fsa.usda.gov/cropinsurance). For FSA and NRCS programs, they should contact their local [USDA Service Center](https://www.fsa.usda.gov/servicecenters).

---

**Sign Up to be Counted in the 2022 Census of Agriculture by June 30**

Sign up and be counted in the 2022 Ag Census! Agriculture producers who did not receive the 2017 Census of Agriculture and do not receive other USDA surveys or censuses have until June 30 to sign up to receive the 2022 Census of Agriculture at [nass.usda.gov/AgCensus](https://nass.usda.gov/AgCensus). This once-every-five-years data collection begins this November.

The Ag Census includes every American operation – large or small, urban or rural – from which $1,000 or more of agricultural products are produced and sold, or would normally be produced and sold, in the ag census year. This can include hobby farms with livestock, such as chickens or horses, or crops growing in the backyard or on a rooftop. The data inform policy and program decisions that directly impact producers, their operations, industries, and communities. A complete count, with every producer getting and taking the opportunity to be represented in these data, is vital.

On the [NASS Ag Census webpage](https://www.nass.usda.gov/AgCensus), producers can also access frequently asked questions, explore past and current Ag Census data, access tools to help spread the word about the upcoming Ag Census, learn about Ag Census special studies, and more.
USDA to Allow Producers to Request Voluntary Termination of Conservation Reserve Program Contract

The U.S. Department of Agriculture (USDA) will allow Conservation Reserve Program (CRP) participants who are in the final year of their CRP contract to request voluntary termination of their CRP contract following the end of the primary nesting season for fiscal year 2022. Participants approved for this one-time, voluntary termination will not have to repay rental payments, a flexibility implemented this year to help mitigate the global food supply challenges caused by the Russian invasion of Ukraine and other factors. Today, USDA also announced additional flexibilities for the Environmental Quality Incentives Program (EQIP) and Conservation Stewardship Program (CSP).

FSA is mailing letters to producers with expiring acres that detail this flexibility and share other options, such as re-enrolling sensitive acres in the CRP Continuous signup and considering growing organic crops. Producers will be asked to make the request for voluntary termination in writing through their local USDA Service Center.

If approved for voluntary termination, preparations can occur after the conclusion of the primary nesting season. Producers will then be able to hay, graze, begin land preparation activities and plant a fall-seeded crop before October 1, 2022. For land in colder climates, this flexibility may allow for better establishment of a winter wheat crop or better prepare the land for spring planting.

Organic Considerations

Since CRP land typically does not have a recent history of pesticide or herbicide application, USDA is encouraging producers to consider organic production. USDA’s Natural Resources Conservation Service (NRCS) provides technical and financial assistance to help producers plan and implement conservation practices, including those that work well for organic operations, such as pest management and mulching. Meanwhile, FSA offers cost-share for certification costs and other fees.

Other CRP Options

Participants can also choose to enroll all or part of their expiring acres into the Continuous CRP signup for 2022. Important conservation benefits may still be achieved by re-enrolling sensitive acres such as buffers or wetlands. Expiring water quality practices such as filter strips, grass waterways, and riparian buffers may be eligible to be reenrolled under the Clean Lakes, Estuaries, and Rivers (CLEAR) and CLEAR 30 options under CRP. Additionally, expiring continuous CRP practices such as shelterbelts, field windbreaks, and other buffer practices may also be re-enrolled to provide benefits for organic farming operations.

If producers are not planning to farm the land from their expiring CRP contract, the Transition Incentives Program (TIP) may also provide them two additional annual rental payments after their contract expires on the condition that they sell or rent their land to a beginning or veteran farmer or rancher or a member of a socially disadvantaged group.
Producers interested in the Continuous CRP signup, CLEAR 30, or TIP should contact FSA by Aug. 5, 2022.

NRCS Conservation Programs

USDA also encourages producers to consider NRCS conservation programs, which help producers integrate conservation on croplands, grazing lands and other agricultural landscapes. EQIP and CSP can help producers plant cover crops, manage nutrients and improve irrigation and grazing systems. Additionally, the Agricultural Conservation Easement Program (ACEP), or state or private easement programs, may be such an option. In many cases, a combination of approaches can be taken on the same parcel. For example, riparian areas or other sensitive parts of a parcel may be enrolled in continuous CRP and the remaining land that is returned to farming can participate in CSP or EQIP and may be eligible to receive additional ranking points.

Other Flexibilities to Support Conservation

Additionally, NRCS is also offering a new flexibility for EQIP and CSP participants who have cover cropping including in their existing contracts. NRCS will allow participants to either modify their plans to plant a cover crop (and instead shift to a conservation crop rotation) or delay their cover crop plans a year, without needing to terminate the existing contract. This will allow for flexibility to respond to market signals while still ensuring the conservation benefits through NRCS financial and technical assistance for participating producers.

More Information

Producers and landowners can learn more about these options by contacting FSA and NRCS at their local USDA Service Center.

Five Facts About the United States Drought Monitor

This is likely no surprise to you, but drought persists across the western U.S. and is intensifying in some areas. No geographic area is immune to the potential of drought at any given time. The U.S. Drought Monitor provides a weekly drought assessment, and it plays an important role in USDA programs that help farmers and ranchers recover from drought.

Fact #1 - Numerous agencies use the Drought Monitor to inform drought-related decisions.

The map identifies areas of drought and labels them by intensity on a weekly basis. It categorizes the entire country as being in one of six levels of drought. The first two, None and Abnormally Dry (D0), are not considered to be drought. The next four describe increasing levels of drought: Moderate (D1), Severe (D2), Extreme (D3) and Exceptional (D4).

While many entities consult the Drought Monitor for drought information, drought declarations are made by federal, state and local agencies that may or may not use the Drought Monitor to inform their decisions. Some of the ways USDA uses it to determine a producer’s eligibility for certain drought assistance programs, like the Livestock Forage Disaster
Program and Emergency Haying or Grazing on Conservation Reserve Program acres and to “fast-track” Secretarial drought disaster designations.

Fact #2 - U.S. Drought Monitor is made with more than precipitation data.

When you think about drought, you probably think about water, or the lack of it. Precipitation plays a major role in the creation of the Drought Monitor, but the map’s author considers numerous indicators, including drought impacts and local insight from over 450 expert observers around the country. Authors use several dozen indicators to assess drought, including precipitation, streamflow, reservoir levels, temperature and evaporative demand, soil moisture and vegetation health. Because the drought monitor depicts both short and long-term drought conditions, the authors must look at data for multiple timeframes. The final map produced each week represents a summary of the story being told by all the pieces of data. To help tell that story, authors don’t just look at data. They converse over the course of the map-making week with experts across the country and draw information about drought impacts from media reports and private citizens.

Fact #3 - A real person, using real data, updates the map.

Each week’s map author, not a computer, processes and analyzes data to update the drought monitor. The map authors are trained climatologists or meteorologists from the National Drought Mitigation Center at the University of Nebraska-Lincoln (the academic partner and website host of the Drought Monitor), the National Oceanic and Atmospheric Administration and USDA. The author’s job is to do what a computer can’t – use their expertise to reconcile the sometimes-conflicting stories told by each stream of data into a single assessment.

Fact #4 - The Drought Monitor provides a current snapshot, not a forecast.

The Drought Monitor is a “snapshot” of conditions observed during the most recent week and builds off the previous week’s map. The map is released on Thursdays and depicts conditions based on data for the week that ended the preceding Tuesday. Rain that falls on the Wednesday just before the USDM’s release won’t be reflected until the next map is published. This provides a consistent, week-to-week product and gives the author a window to assess the data and come up with a final map.

Fact #5 – Your input can be part of the drought-monitoring process.

State climatologists and other trained observers in the drought monitoring network relay on-the-ground information from numerous sources to the US Drought monitor author each week. That can include information that you contribute.

The Drought Monitor serves as a trigger for multiple forms of federal disaster relief for agricultural producers, and sometimes producers contact the author to suggest that drought conditions in their area are worse than what the latest drought monitor shows. When the author gets a call like that, it prompts them to look closely at all available data for that area, to see whether measurements of precipitation, temperature, soil moisture and other indicators corroborate producer-submitted reports. This is the process that authors follow whether they receive one report or one hundred reports, although reports from more points may help state officials and others know where to look for impacts.

There are multiple ways to contribute your observations:
1. **Talk to your state climatologist** - Find the current list at the [American Association of State Climatologists](https://www.aasc.coe.umn.edu) website.

2. **Email** - Emails sent to droughtmonitor@unl.edu inform the USDM authors.

3. **Become a CoCoRaHS observer** - Submit drought reports along with daily precipitation observations to the [Community Collaborative Rain, Hail & Snow Network](https://www.coorsahs.org).

4. **Submit Condition Monitoring Observer Reports (CMOR)** - [go.unl.edu/CMOR](http://go.unl.edu/CMOR).

For more information, read our [Ask the Expert blog with a NDMC climatologist](https://www.usa.gov) or visit [farmers.gov/protection-recovery](https://www.farmers.gov/)

---

**Tree Assistance Program**

If you’re an orchardist or nursery tree grower who experienced losses from natural disasters during calendar year 2022, you must submit a TAP application either 90 calendar days after the disaster event or the date when the loss is apparent.

TAP provides financial assistance to help you replant or rehabilitate eligible trees, bushes and vines damaged by natural disasters.

Eligible tree types include trees, bushes or vines that produce an annual crop for commercial purposes. Nursery trees include ornamental, fruit, nut and Christmas trees that are produced for commercial sale. Trees used for pulp or timber are ineligible.

To qualify for TAP, orchardists must suffer a qualifying tree, bush or vine loss in excess of 15 percent mortality from an eligible natural disaster, plus an adjustment for normal mortality. The eligible trees, bushes or vines must have been owned when the natural disaster occurred; however, eligible growers are not required to own the land on which the eligible trees, bushes and vines were planted.

If the TAP application is approved, the eligible trees, bushes and vines must be replaced within 12 months from the date the application is approved. The cumulative total quantity of acres planted to trees, bushes or vines, for which you can receive TAP payments, cannot exceed 1,000 acres annually.

---

**USDA Reminds Producers to File Crop Acreage Reports**

Agricultural producers who have not yet completed their [crop acreage reports](https://www.fsa.usda.gov) after spring planting should make an appointment with their [local Farm Service Agency (FSA)](https://www.fsa.usda.gov) before the applicable deadline.

An acreage report documents a crop grown on a farm or ranch and its intended uses. Filing an accurate and timely acreage report for all crops and land uses, including failed acreage and prevented planted acreage, can prevent the loss of benefits.
How to File a Report

The following acreage reporting dates are applicable in South Carolina:

<table>
<thead>
<tr>
<th>Crops</th>
<th>Crop Reporting Dates</th>
</tr>
</thead>
<tbody>
<tr>
<td>Honey</td>
<td>January 2</td>
</tr>
<tr>
<td>Apples, Blueberries, Canola, Peaches, Fall-Seeded Small Grains</td>
<td>January 15</td>
</tr>
<tr>
<td>Tomatoes (Planted 3/15 – 4/30)</td>
<td>May 15</td>
</tr>
<tr>
<td>All other crops, Perennial Forage (see below for NAP eligibility)</td>
<td>July 15</td>
</tr>
<tr>
<td>CRP</td>
<td>July 15</td>
</tr>
<tr>
<td>Hemp</td>
<td>July 31</td>
</tr>
<tr>
<td>Tomatoes (Planted 7/1- 7/15)</td>
<td>August 15</td>
</tr>
<tr>
<td>Value-loss and controlled environment crops (except Nursery)</td>
<td>September 30</td>
</tr>
<tr>
<td>Apiculture</td>
<td>November 15</td>
</tr>
<tr>
<td>Clams</td>
<td>November 30</td>
</tr>
</tbody>
</table>

Service Center staff continue to work with agricultural producers via phone, email, and other digital tools. Because of the pandemic, some USDA Service Centers are open to limited visitors. Contact your local County FSA office to set up an in-person or phone appointment.

To file a crop acreage report, you will need to provide:

- Crop and crop type or variety.
- Intended use of the crop.
- Number of acres of the crop.
- Map with approximate boundaries for the crop.
• Planting date(s).
• Planting pattern, when applicable.
• Producer shares.
• Irrigation practice(s).
• Acreage prevented from planting, when applicable.
• Other information as required.

Acreage Reporting Details

The following exceptions apply to acreage reporting dates:

• If the crop has not been planted by the acreage reporting date, then the acreage must be reported no later than 15 calendar days after planting is completed.

• If a producer acquires additional acreage after the acreage reporting date, then the acreage must be reported no later than 30 calendar days after purchase or acquiring the lease. Appropriate documentation must be provided to the county office.

Producers should also report crop acreage they intended to plant, but due to natural disaster, were unable to plant. Prevented planting acreage must be reported on form CCC-576, Notice of Loss, no later than 15 calendar days after the final planting date as established by FSA and USDA’s Risk Management Agency.

Noninsured Crop Disaster Assistance Program (NAP) policy holders should note that the acreage reporting date for NAP-covered crops is the earlier of the dates listed above or 15 calendar days before grazing or harvesting of the crop begins.

USDA Updates Farm Loan Programs to Increase Equity

The U.S. Department of Agriculture (USDA) is updating its farm loan programs to better support current borrowers, including historically underserved producers. These improvements are part of USDA’s commitment to increase equity in all programs, including farm loans that provide important access to capital for covering operating expenses and purchasing land and equipment.

The 2018 Farm Bill authorized FSA to provide equitable relief to certain direct loan borrowers, who are non-compliant with program requirements due to good faith reliance on a material action of, advice of, or non-action from an FSA official. Previously, borrowers may have been required to immediately repay the loan or convert it to a non-program loan with higher interest rates, less favorable terms, and limited loan servicing.

Now, FSA has additional flexibilities to assist borrowers in such situations. If the agency provided incorrect guidance to an existing direct loan borrower, the agency may provide equitable relief to that borrower. FSA may assist the borrower by allowing the borrower to keep their loans at current rates or other terms received in association with the loan which
was determined to be noncompliant or the borrower may receive other equitable relief for the loan as the Agency determines to be appropriate.

USDA encourages producers to reach out to their local loan officials to ensure they fully understand the wide range of loan and servicing options available that can assist them in starting, expanding or maintaining their operation.

**Additional Updates**

Equitable relief is one of several changes authorized by the 2018 Farm Bill that USDA has made to the direct and guaranteed loan programs. Other changes that were previously implemented include:

- Modifying the existing three-year farming experience requirement for Direct Farm Ownership loans to include additional items as acceptable experience.
- Allowing socially disadvantaged and beginning farmer applicants to receive a guarantee equal to 95%, rather than the otherwise applicable 90% guarantee.
- Expanding the definition of and providing additional benefits to veteran farmers.
- Allowing borrowers who received restructuring with a write down to maintain eligibility for an Emergency loan.
- Expanding the scope of eligible issues and persons covered under the agricultural Certified Mediation Program.

Additional information on these changes is available in the March 8, 2022 rule on the Federal Register.

**More Background**

FSA has taken other recent steps to increase equity in its programs. Last summer, USDA announced it was providing $67 million in competitive loans through its new Heirs' Property Relending Program to help agricultural producers and landowners resolve heirs' land ownership and succession issues. FSA also invested $4.7 million to establish partnerships with organizations to provide outreach and technical assistance to historically underserved farmers and ranchers, which contributed to a fourfold increase in participation by historically underserved producers in the Coronavirus Food Assistance Program 2 (CFAP 2), a key pandemic assistance program, since April 2021.

Additionally, in January 2021, Secretary Vilsack announced a temporary suspension of past-due debt collection and foreclosures for distressed direct loan borrowers due to the economic hardship imposed by the COVID-19 pandemic.

Producers can explore available loan options using the Farm Loan Discover Tool on farmers.gov (also available in Spanish) or by contacting their local USDA Service Center. Service Center staff continue to work with agricultural producers via phone, email, and other digital tools. Due to the pandemic, some USDA Service Centers are open to limited visitors. Producers can contact their local Service Center to set up an in-person or phone appointment to discuss loan options.
FSA Offers Loan Servicing Options

There are options for Farm Service Agency (FSA) loan customers during financial stress. If you are a borrower who is unable to make payments on a loan, contact your local FSA Farm Loan Manager to learn about your options.
