Purpose

The State Acres for Wildlife Enhancement (SAFE) Initiative restores vital habitat in order to meet high priority state wildlife conservation goals. The Conservation Reserve Program (CRP) provides farmers and landowners with several opportunities like this to achieve many conservation goals. Participation in the Texas Mixed Grass & Short Grass Prairie SAFE Initiative allows landowners to reconnect geographically and reproductively isolated populations of lesser prairie-chickens by creating, restoring, and maintaining 40,000 acres of native short and mixed-grass prairie habitat patches and travel corridors in:

Benefits

The potential benefits of this SAFE Initiative include:

- Habitat restoration for grassland wildlife
- Removal of less productive cropland acres to reduce losses to low yield (whole fields and field borders/pivot corners)
- Erosion and runoff prevention
- Water quality and aquifer recharge improvement
- Carbon Sequestration

Eligibility

CRP enrolls existing cropland into conservation cover. CP-38E is a cropland practice. Land offered for enrollment must satisfy basic CRP eligibility and cropping history requirements. Landowners should check with their local FSA office to determine individual eligibility.

Practice Requirements

Contracted acres must be planted and managed to an approved mix of native grasses, wildflowers, and forbs, or woody shrubs according to NRCS practice standards for 327 - Conservation Cover or 420 - Wildlife Habitat Planting. Native bunch grasses shall make up >25% of the seed mix. Only native plant species are permitted. Maintenance and management activities are required according to program guidelines.
Financial Assistance

Financial assistance through this SAFE Initiative may include:

- 50% cost share for practice establishment
- 10 year contracts
- 85% Soil Rental Rate annual payments possible for Permanent Wildlife Habitat (CP4D) whole-field enrollments
- 90% Soil Rental Rate payments, 32.5% Signing Incentive Payment, and 5% Practice Incentive Payments may be possible for Habitat Buffers for Upland Birds for field edges or pivot corners (CP33).
