From Brenda’s Desk

It’s harvest time in the Big Horn Basin, hard to believe that this year has flown by so fast. Crop reporting is behind us and we will now be shifting our focus to program signups including the Livestock Forage Program (LFP), Emergency Livestock Assistance Program (ELAP) for water hauling due to drought, Conservation Reserve Program-Grassland (CRP-G), and Emergency Conservation Program (ECP) for drought. If your operation has been affected by the drought, contact our office, and discuss your options available through our various programs.

I’m asking our producers who have been impacted by the drought to carefully read the attached article about the drought monitor. At the bottom of this article there is a place to get more information about the drought monitor, and within this site you can learn how to help document our local drought impacted areas. By doing this you will be helping the site and our county to have more accurate reporting since several of our programs rely on the drought monitor site for program eligibility. The more we help with reporting the more accurate it will be.

Wishing everyone a safe and prosperous harvest. As always, we are here at Big Horn County FSA to serve your agriculture needs as much as possible.

USDA Announces Dates for Conservation Reserve Program Grasslands Signups

Agricultural producers and landowners in Wyoming can apply for the Conservation Reserve Program (CRP) Grasslands signup from today until August 20. This year, the U.S. Department of Agriculture (USDA) updated signup options to provide greater incentives for producers and increased the program’s conservation and climate benefits, including setting a minimum rental rate and identifying two national priority zones.

The CRP Grassland signup is competitive, and USDA’s Farm Service Agency (FSA) will provide for annual rental payments for land devoted to conservation purposes.

Grasslands Signup

CRP Grasslands helps Wyoming landowners and operators protect grassland, including rangeland, and pastureland and certain other lands, while maintaining the areas as working grazing lands. Protecting grasslands contributes positively to the economy of many regions, provides biodiversity of plant and animal populations, and provides important carbon sequestration benefits.
FSA has updated the Grasslands Signup to establish a minimum rental rate of $15 per acre, which will benefit 1,300 counties.

To focus on important wildlife corridors, FSA also identified National Grassland Priority Zones, providing extra incentives to producers for enrolling grasslands in important migratory corridors and environmentally sensitive areas – the Greater Yellowstone Elk Migration Corridor and the Severe Wind Erosion – Dust Bowl Zone. Counties within these two zones get extra ranking points as well as $5 added to their rental rate. The CRP Grasslands Ranking Factors fact sheet has additional information.

How to Sign Up

To enroll in the CRP Grasslands signup, producers and landowners should contact USDA by the August 20 deadline. Service Center staff continue to work with agricultural producers via phone, email, and other digital tools. Because of the pandemic, some USDA Service Centers are open to limited visitors. Contact your Service Center to set up an in-person or phone appointment. Additionally, more information related to USDA’s response and relief for producers can be found at farmers.gov/coronavirus.

More Information on CRP

Signed into law in 1985, CRP is one of the largest voluntary private-lands conservation programs in the United States. It was originally intended to primarily control soil erosion and potentially stabilize commodity prices by taking marginal lands out of production. The program has evolved over the years, providing many conservation and economic benefits. The program marked its 35-year anniversary this past December.

Understanding the U.S. Drought Monitor

Are drought conditions affecting your agricultural operation? The U.S. Drought Monitor (USDM) is a resource producers can use to help determine how to best respond and react to a drought as it develops or lingers.

The USDM is an online, weekly map showing the location, extent, and severity of drought across the United States. It categorizes the entire country as being in one of six levels of drought. The map is released on Thursdays and depicts conditions for the week.

The USDM provides producers with the latest information about drought conditions where they live, enabling producers to best respond and react to a drought as it develops or lingers. In some cases, the USDM may help a producer make specific decisions about their operation, such as reducing the stocking rate because forage is not growing. For others, it may provide a convenient big-picture snapshot of broader environmental conditions.

The USDM incorporates varying data – rain, snow, temperature, streamflow, reservoir levels, soil moisture, and more – as well as first-hand information submitted from on-the-ground sources such as photos, descriptions, and experiences. The levels of drought are connected to the frequency of occurrence across several different drought indicators. What makes the USDM unique is that it is not a strictly numeric product. The mapmakers rely on their judgment and a nationwide network of 450-plus experts to interpret conditions for each region. They synthesize their discussion and analysis into a single depiction of drought for the entire country.

USDA uses the Drought Monitor to determine a producer’s eligibility for certain drought assistance programs, like the Livestock Forage Disaster Program and Emergency Haying or Grazing on Conservation Reserve Program acres.

Additionally, the Farm Service Agency uses the Drought Monitor to trigger and “fast track” Secretarial Disaster Designations which then provides producers impacted by drought access to emergency loans that can assist with credit needs.

Farmers.gov Feature Helps Producers Find Farm Loans that Fit Their Operation

Farmers.gov Feature Helps Producers Find Farm Loans that Fit Their Operation

Farmers and ranchers can use the Farm Loan Discovery Tool on farmers.gov to find information on USDA farm loans that may best fit their operations.

USDA’s Farm Service Agency (FSA) offers a variety of loan options to help farmers finance their operations. From buying land to financing the purchase of equipment, FSA loans can help.

USDA conducted field research in eight states, gathering input from farmers and FSA farm loan staff to better understand their needs and challenges.

How the Tool Works

Farmers who are looking for financing options to operate a farm or buy land can answer a few simple questions about what they are looking to fund and how much money they need to borrow. After submitting their answers, farmers will receive information on farm loans that best fit their specific needs. The loan application and additional resources also will be provided.

Farmers can download application quick guides that outline what to expect from preparing an application to receiving a loan decision. There are four guides that cover loans to individuals, entities, and youth, as well as information on microloans. The guides include general eligibility requirements and a list of required forms and documentation for each type of loan. These guides can help farmers prepare before their first USDA service center visit with a loan officer.

Farmers can access the Farm Loan Discovery Tool by visiting farmers.gov/fund and clicking the “Start” button. Follow the prompts and answer five simple questions to receive loan information that is applicable to your agricultural operation. The tool is built to run on any modern browser like Chrome, Edge, Firefox, or the Safari browser, and is fully functional on mobile devices. It does not work in Internet Explorer.

About Farmers.gov

In 2018, USDA unveiled farmers.gov, a dynamic, mobile-friendly public website combined with an authenticated portal where farmers will be able to apply for programs, process transactions, and manage accounts.

The Farm Loan Discovery Tool is one of many resources on farmers.gov to help connect farmers to information that can help their operations. Earlier this year, USDA launched the My Financial Information feature, which enables farmers to view their loan information, history, payments, and alerts by logging into the website.

USDA is building farmers.gov for farmers, by farmers. In addition to the interactive farm loan features, the site also offers a Disaster Assistance Discovery Tool. Farmers can visit farmers.gov/recover/disaster-assistance-tool#step-1 to find disaster assistance programs that can help their operation recover from natural disasters.

For more information, contact your Big Horn County USDA Service Center at 307-765-2689 Ext 2, or visit farmers.gov.
