Streamlining How You Find Information on Farmers.gov

If you've been to farmers.gov before, things may look a little different from the last time you were here. We've made some changes, to improve how you find information so that you can find what you need even more easily and efficiently.

The big, green navigation bar near the top of every page – it’s different now. It opens up, to show descriptions and subtopics, making it quicker and easier to figure out what’s where and reduce guessing. Why? Two reasons: First, farmers.gov has grown a lot over the years and the old navigation wasn’t designed for the load. Second, because you asked for it. We analyzed your comments through the “Feedback” button on the site and tested our new designs and information organization with real farmers and ranchers through surveys and live testing sessions.

Along with the new website navigation, we restructured how our pages and topics are grouped and organized to help you easily access the information you need. We also relabeled some of our existing pages using more direct language. This means that pages or information you’ve used before may have different labels or be in new places.

**Important changes:**

- The old Fund page is now called Loans. The Loans page has information and resources about USDA loans, including the Farm Loan Programs.
- The Recover page is now Protection and Recovery. This page has information to help you prepare and recover from natural disasters, and to mitigate risk for your operation.
- The Conserve page is now Conservation. This page hasn’t changed much and still has information on how to implement conservation practices, improve and preserve natural resources, and address conservation concerns.
- The Manage page is now Working With Us. This page connects you with resources that tell you how USDA can help you start, expand, enhance, or improve your agricultural operation.
- The Connect page has been replaced with Your Business, a guide to USDA resources that cater to your specific operation. Information that was on the Connect page has been moved to the Contact Us page and the Get Involved page.

We are always updating farmers.gov based on your feedback and to stay up-to-date with important USDA announcements. We’ve recently created some new webpages, and updated some existing ones, to better equip you with the vital information you need. There are even more new pages coming soon, so stay tuned!

For farmers.gov, we don’t guess what farmers and ranchers want from a website. We start by asking, then test our designs with volunteers who are also farmers and ranchers.
There’s a feedback button on every page of farmers.gov. Based on your feedback, we looked for ways to make our site easier to use and to build the information that you’re looking for. Live user testing sessions provide data, such as this heatmap, showing where testers tended to click during an exercise.

You helped us create the new navigation design, the new information organization, and told us how to speak using your words, and not legalese.

Check out farmers.gov today!

USDA Offers Disaster Assistance for Producers Facing Inclement Weather

Severe weather events create significant challenges and often result in catastrophic loss for agricultural producers. Despite every attempt to mitigate risk, your operation may suffer losses. USDA offers several programs to help with recovery.

Risk Management

For producers who have risk protection through Federal Crop Insurance or the Noninsured Crop Disaster Assistance Program (NAP), we want to remind you to report crop damage to your crop insurance agent or the local Farm Service Agency (FSA) office.

If you have crop insurance, contact your agency within 72 hours of discovering damage and be sure to follow up in writing within 15 days. If you have NAP coverage, file a Notice of Loss (also called Form CCC-576) within 15 days of loss becoming apparent, except for hand-harvested crops, which should be reported within 72 hours.

Disaster Assistance

USDA also offers disaster assistance programs, which is especially important to livestock, fruit and vegetable, specialty and perennial crop producers who have fewer risk management options.

First, the Livestock Indemnity Program (LIP) and Emergency Assistance for Livestock, Honeybee and Farm-raised Fish Program (ELAP) reimburses producers for a portion of the value of livestock, poultry and other animals that died as a result of a qualifying natural disaster event or for loss of grazing acres, feed and forage. And, the Livestock Forage Disaster Program (LFP) provides assistance to producers of grazed forage crop acres that have suffered crop loss due to a qualifying drought. Livestock producers suffering the impacts of drought can also request Emergency Haying and Grazing on Conservation Reserve Program (CRP) acres.

Next, the Tree Assistance Program (TAP) provides cost share assistance to rehabilitate and replant tree, vines or shrubs loss experienced by orchards and nurseries. This complements NAP or crop insurance coverage, which cover the crop but not the plants or trees in all cases.

For LIP and ELAP, you will need to file a Notice of Loss for livestock and grazing or feed losses within 30 days and honeybee losses within 15 days. For TAP, you will need to file a program application within 90 days.

Documentation

It’s critical to keep accurate records to document all losses following this devastating cold weather event. Livestock producers are advised to document beginning livestock numbers by taking time and date-stamped video or pictures prior to after the loss.

Other common documentation options include:

- Purchase records
- Production records
• Vaccination records
• Bank or other loan documents
• Third-party certification

Other Programs

The Emergency Conservation Program and Emergency Forest Restoration Program can assist landowners and forest stewards with financial and technical assistance to restore damaged farmland or forests.

Additionally, FSA offers a variety of loans available including emergency loans that are triggered by disaster declarations and operating loans that can assist producers with credit needs. You can use these loans to replace essential property, purchase inputs like livestock, equipment, feed and seed, or refinance farm-related debts, and other needs.

Meanwhile, USDA’s Natural Resources Conservation Service (NRCS) provides financial resources through its Environmental Quality Incentives Program to help with immediate needs and long-term support to help recover from natural disasters and conserve water resources. Assistance may also be available for emergency animal mortality disposal from natural disasters and other causes.

Additional Resources

Additional details – including payment calculations – can be found on our NAP, ELAP, LIP, and TAP fact sheets. On farmers.gov, the Disaster Assistance Discovery Tool, Disaster-at-a-Glance fact sheet, and Farm Loan Discovery Tool can help you determine program or loan options.

While we never want to have to implement disaster programs, we are here to help. To file a Notice of Loss or to ask questions about available programs, contact your local USDA Service Center. All USDA Service Centers are open for business, including those that restrict in-person visits or require appointments because of the pandemic.

Farmers Help America Keep Soil Healthy

Our lives are dependent on healthy soil. Healthy soil gives us clean air and water, bountiful crops and forests, productive grazing lands, diverse wildlife and beautiful landscapes. It’s the reason why USDA’s Natural Resources Conservation Service experts are in your community and across the nation.

Soil is composed of air, water, organic matter and minerals. A community of organisms – functioning as a soil food web – lives all or parts of their lives in soil. More individual organisms are in a teaspoon of soil than there are people on earth. Increasing soil organic matter typically improves soil health, since organic matter improves several critical functions of soil.

To improve the health of their soil, more and more farmers and ranchers are keeping soil covered, reducing disturbance activities such as tilling, keeping plants growing throughout the year, and diversifying the crops they’re planting in a rotation. Taking these steps allow farmers and ranchers to help reduce erosion while increasing the soil’s ability to provide nutrients and water to the plant at critical times during the growing season.

When producers focus on improving soil health, they often have larger harvests, lower input costs, optimized nutrient use, and improved crop resilience during drought years like last year. In heavy rainfall years, healthy soil holds more water, reducing runoff that helps avert flooding downstream.

And because healthy soil allows for greater water infiltration and less erosion, nutrients and pesticides stay on the farm where they benefit crops and are far less likely to be carried off the farm into streams and lakes where they can cause harm.
NRCS helps farmers install conservation practices such as cover crops to maintain and improve soil health – all of which can lead to productive, profitable and sustainable farming and ranching operations for generations to come.

For more information, contact your local County USDA Service Center at 307-362-3062 ext 3 (Rock Springs) or 307-787-3859 ext 3 (Lyman) or visit nrcs.usda.gov.

---

No-till Leads to Healthier Soil, Cleaner Water

In the minds of many, a freshly tilled field is picturesque – cleaned and ordered for the next planting. But we’ve learned from studying soil that heavy tillage isn’t good. When soil is heavily tilled, the stalks and leaves remaining from the previous crop are chopped, disturbing the top several inches of soil. This “fluffing” action allows for better seed placement according to some, but soil scientists say not tilling leads to healthier, more drought-resistant soil.

USDA’s Natural Resources Conservation Service and other groups recommend producers to not till and leave the stalks and leaves, called residue, in place. By not tilling, soil organic matter is enhanced, increasing water infiltration and reducing erosion. No-till is a conservation practice that leaves the crop residue undisturbed from harvest.

Any tillage causes a flush of organic matter decomposition, resulting in loss of soil carbon. Tillage also breaks up soil aggregates, which are important for water infiltration, providing oxygen to plant roots, and reducing erosion.

Healthy soils cycle water and nutrients more efficiently. And they function better, enabling them to buffer against extreme drought and flooding. Plus, they reduce soil loss into waterways, which can cause problems for water quality.

Good management of field residue can increase efficiency of irrigation and control erosion. No-till can be used for many crops in almost any soil and can save producers labor costs and fuel. It’s a sound investment for the environment and the farm.

For more information, contact your local County USDA Service Center at 307-362-3062 ext 3 (Rock Springs) or 307-787-3859 ext 3 (Lyman) or visit nrcs.usda.gov.

Applying for FSA Guaranteed Loans

FSA guaranteed loans allow lenders to provide agricultural credit to farmers who do not meet the lender's normal underwriting criteria. Farmers and ranchers apply for a guaranteed loan through a lender, and the lender arranges for the guarantee. FSA can guarantee up to 95 percent of the loss of principal and interest on a loan. Guaranteed loans can be used for both farm ownership and operating purposes.

Guaranteed farm ownership loans can be used to purchase farmland, construct or repair buildings, develop farmland to promote soil and water conservation or to refinance debt.

Guaranteed operating loans can be used to purchase livestock, farm equipment, feed, seed, fuel, farm chemicals, insurance and other operating expenses.

FSA can guarantee farm ownership and operating loans up to $1,776,000. Repayment terms vary depending on the type of loan, collateral and the producer's ability to repay the loan. Operating loans are normally repaid within seven years and farm ownership loans are not to exceed 40 years.

For more information on guaranteed loans, contact your Sweetwater/Sublette and Uinta County USDA Farm Loan Manager at 307-856-7524 ext 2 or visit fsa.usda.gov.
