Rebecca's Recap

I hope you all had a Merry Christmas and Happy 2022.

The Sweetwater/Sublette County Farm Service Agency (FSA) would like to announce that the County Committee elections are over, and the ballots have been counted. Congratulations to David Pape and Shelby Arambel for being re-elected to the committee. Dave and Shelby will represent the producers of Sublette County. Committee members representing Sweetwater County are Robert Slagowski and Bonnie Hueckstaedt. The County Committees are a very important part of FSA and I thank them all for once again taking on this responsibility.

Recently, a newsletter was mailed out to the producers of Sweetwater and Sublette counties. Please be sure to look at the newsletter and give the FSA office a call if you have questions or if you are interested in signing up for one our programs.

Until next time.

FSA Outlines MAL and LDP Policy

The 2018 Farm Bill extends loan authority through 2023 for Marketing Assistance Loans (MALs) and Loan Deficiency Payments (LDPs).

MALs and LDPs provide financing and marketing assistance for wheat, feed grains, soybeans, and other oilseeds, pulse crops, rice, peanuts, cotton, wool and honey. MALs provide you with interim financing after harvest to help you meet cash flow needs without having to sell your commodities when market prices are typically at harvest-time lows. A producer who is eligible to obtain a loan, but agrees to forgo the loan, may obtain an LDP if such a payment is available. Marketing loan provisions and LDPs are not available for sugar and extra-long staple cotton.

FSA is now accepting requests for 2022 MALs and LDPs for all eligible commodities after harvest. Requests for loans and LDPs shall be made on or before the final availability date for the respective commodities.

Commodity certificates are available to loan holders who have outstanding nonrecourse loans for wheat, upland cotton, rice, feed grains, pulse crops (dry peas, lentils, large and small chickpeas), peanuts, wool, soybeans and designated minor oilseeds. These certificates can be purchased at the posted county price (or adjusted world price or national posted price) for the quantity of commodity under loan, and must be immediately exchanged for the collateral, satisfying the loan. MALs redeemed with commodity certificates are not subject to Adjusted Gross Income provisions.
To be considered eligible for an LDP, you must have form CCC-633EZ on file at your local FSA Office before losing beneficial interest in the crop. Pages 2, 3 or 4 of the form must be submitted when payment is requested.

Marketing loan gains (MLGs) and loan deficiency payments (LDPs) are no longer subject to payment limitations, actively engaged in farming and cash-rent tenant rules.

Adjusted Gross Income (AGI) provisions state that if your total applicable three-year average AGI exceeds $900,000, then you’re not eligible to receive an MLG or LDP. You must have a valid CCC-941 on file to earn a market gain of LDP. The AGI does not apply to MALs redeemed with commodity certificate exchange.

For more information and additional eligibility requirements, contact Sweetwater/Sublette County USDA Service Center at 307-362-3062 or visit fsa.usda.gov.

Change to Policy on Filing a Notice of Loss for Grazed Forage Producers with NAP Coverage

For the 2021 and subsequent crop years, NAP forage producers with the intended use of grazing who elect to use independent assessments or other approved alternative loss percentage methods to establish their loss are no longer required to file a CCC-576 Notice of Loss with FSA. However, a CCC-576 Application for Payment form must be submitted to FSA no later than 60 calendar days after the coverage period ends.

Producers that elect to have the grazing loss determined using similar mechanically harvested units still must timely file a CCC-576 Notice of Loss within 15 days of the disaster event or damage to the crop first becomes apparent or within 15 days of harvest.

Submit Loan Requests for Financing Early

The Farm Loan team in Fremont County is already working on operating loans for spring 2022 and asks potential borrowers to submit their requests early so they can be timely processed. The farm loan team can help determine which loan programs are best for applicants.

FSA offers a wide range of low-interest loans that can meet the financial needs of any farm operation for just about any purpose. The traditional farm operating, and farm ownership loans can help large and small farm operations take advantage of early purchasing discounts for spring inputs as well expenses throughout the year.

Microloans are a simplified loan program that will provide up to $50,000 for both Farm Ownership and Operating Microloans to eligible applicants. These loans, targeted for smaller and non-traditional operations, can be used for operating expenses, starting a new operation, purchasing equipment, and other needs associated with a farming operation. Loans to beginning farmers and members of underserved groups are a priority.

Other types of loans available include:

Marketing Assistance Loans allow producers to use eligible commodities as loan collateral and obtain a 9-month loan while the crop is in storage. These loans provide cash flow to the producer and allow them to market the crop when prices may be more advantageous.

Farm Storage Facility Loans can be used to build permanent structures used to store eligible commodities, for storage and handling trucks, or portable or permanent handling equipment. A variety of structures are eligible under this loan, including bunker silos, grain bins, hay storage structures, and refrigerated structures for vegetables and fruit. A producer may borrow up to $500,000 per loan.

Conservation Planning Helps Improve Farm Productivity
Conservation Planning Helps Improve Farm Productivity

Whether you rent or own your land, a conservation plan is critical to maintain and improve farm productivity. Plans of any kind are important as they set goals and outline how to reach them. Conservation plans are roadmaps for improving your operation while conserving natural resources. They provide proven strategies that landowners can use to solve identified natural resource concerns and take advantage of conservation opportunities.

USDA’s Natural Resources Conservation Service can help you develop a conservation plan. This technical assistance from NRCS is free, and it can help you reduce soil loss from erosion, solve issues with soil, air and water quality, reduce potential damage from excess water and drought, enhance the quality of wildlife habitat, address waste management concerns, and improve the long-term sustainability of the country’s natural resources.

How does conservation planning work? You’ll meet with a planner from NRCS for a science-based evaluation of your problems and opportunities on your land. The NRCS staff member, often a district conservationist or conservation planning technician, then analyzes the findings and recommends the best strategies to address your problems and achieve valuable opportunities.

If you’re interested in conservation planning, contact your Courtney Thomas, Soil Conservationist, NRCS at 307-212-3335.

USDA Invests $2 Million in Risk Management Education for Historically Underserved and Small-Scale Producers

The U.S. Department of Agriculture (USDA) is investing up to $2 million in cooperative agreements this year for risk management education and training programs that support historically underserved producers, small-scale farmers, and conservation practices. USDA’s Risk Management Agency (RMA) is investing in organizations, such as nonprofit organizations, universities, and county cooperative extension offices, to develop training and education tools to help producers learn how to effectively manage long-term risks and challenges.

RMA works with partners to assist producers, especially historically underserved, farmers and ranchers, in effectively managing long-term risks and challenges. RMA re-established its support of risk management education in 2021, investing nearly $1 million in nine risk management education projects. From 2002 to 2018, RMA provided annual funding for risk management education projects, supporting more than $126 million worth of projects in historically underserved communities.

How Organizations Can Apply

A broad range of risk management training activities are eligible for funding consideration, including training on Federal crop insurance options, record keeping, financial management, non-insurance-based risk management tools, and natural disaster preparedness among others. Partners can also train farmers at all levels on risk management options that help secure local food systems.

This selection process is competitive, and RMA will prioritize projects focused on underserved, organic, and specialty crop producers. Additionally, organizations providing training related to climate change, wildfire response, local foods, and urban ag will also be given stronger consideration.

Interested organizations must apply by 5:59 pm Eastern Time on March 11 through the Results Verification System at rvs.umn.edu.
