MYA Price=national average price received by producers during the 12-month marketing year.

Effective reference price (column E), see Table 2.

1/ F= Final MYA prices--Source: National Agricultural Statistics Service (NASS), Agricultural Prices on the publishing dates listed under column C. Exact publishing dates for 2021/22 MYA prices are unavailable, but prices are generally published near the end of the month. P=Projected MYA prices--Source: USDA's World Agricultural Supply and Demand Estimates or Interagency Commodity Estimates Committee Minutes.

2/ The annual benchmark price equals the higher of the effective reference price or the respective MYA price and is used to compute annual ARC-IC benchmark revenues. The ARC-IC benchmark revenue equals the 5-year average of the annual benchmark revenues, excluding the high and low revenues. The ARC-IC revenue guarantee equals 86% of the ARC-IC benchmark revenue. Highlighted prices note when the effective reference price replace MYA price.

3/ The actual ARC-IC price equals the higher of the: (a) 2021/22 MYA price (column K), or (b) 2021 national average loan rate (column L). The actual ARC-IC prices are multiplied by the actual ARC-IC yields and used to determine the ARC-IC actual revenue. The ARC-IC payment rate equals the average ARC-IC revenue guarantee weighted by plantings minus the average ARC-IC actual revenue weighted by plantings, but cannot exceed 10% of the benchmark revenue.

4/ Seed cotton price is a weighted average of upland cotton and cottonseed prices.

5/ Excludes temperate japonica rice.
