Wheatland County April 2008

County Committee Members

Robert O Jones
Bonny Lode
John C Olson

FSA Office Personnel

Myrna Mysse – Acting CED
Donna Hagberg – PT

Bill Ballard – FLM
(406) 657-6135

Dates to Remember:

May 1 – Estate Planning Seminar
May 5 – Dairy Disaster Assistance Program III sign up ends
May 15-Aug. 1 – Primary nesting season
June 2 – Final loan/LDP availability date for Corn, Dry peas, Grain sorghum, Lentils, Mustard seed, Safflower seed, Small chickpeas, Soybeans, and Sunflower seed harvested in 2007
July 15 – Acreage Reporting Deadline
July 15 – 2007 production for NAP APH deadline
July 15 – 2007 NAP application for payment deadline
Notice of Loss – must be filed within 15 calendars after the date of the disaster occurrence or date damage was apparent
September 30 – October 1 – Women Stepping Forward for Agriculture, Billings

Public Comment Available on CRP Managed Haying and Grazing

FSA is accepting public comment on proposed changes to allowable frequencies of managed haying and grazing on CRP acres and changes to primary nesting season dates, during which managed haying and grazing is not permitted.

The proposed changes, if adopted, would apply to those lands enrolled in CRP after September 25, 2006 and existing CRP contracts where managed haying and grazing was not authorized prior to that date. For such lands in Montana, current managed haying and grazing frequencies are once in ten years for managed haying and once in five years for managed grazing. The primary nesting season is from May 15 – August 1. Montana's FSA State Committee determined that changes to the current program provisions were warranted. The proposed changes are to allow managed haying once in five years and managed grazing once in three years. The proposed primary nesting season dates are May 15 – July 15. The public now has the opportunity to comment on whether the proposed changes would be beneficial to wildlife and wildlife habitats on CRP acres in Montana.

Comments received will be considered for a state-specific environmental assessment that will evaluate the affects of the proposed changes in Montana. Comments must be received by close of business on **April 19, 2008**. Comments may be mailed to: MHG EAs, Geo-Marine Incorporated, 2713 Magruder Blvd., Suite D, Hampton, VA 23666-1572 or by logging on to <http://public.geo-marine.com>. Separate comments may be submitted for each area of concern which includes: proposed action, proposed alternatives, water quality, wetlands, floodplains, sole source aquifers, wild and scenic rivers, wildlife, vegetation, threatened and endangered species, socioeconomic resources, cultural resources, air quality, hazard waster materials, and soil quality. Comments are not limited to the above alternatives. Other alternatives may be suggested.

BVD-PI Biosecurity Project

As it enters its third year, the 2008 Montana BVD-PI Herd Biosecurity Project continues to help improve the health of Montana's cow herd and add value to the state's calf crop. In 2008 the project will again provide technical assistance and a screening supply "kit" to Montana ranchers who want to test their cattle for persistent infection (PI) with bovine viral diarrhea (BVD) virus.

The project assists ranchers in preventing transmission of the BVD virus from PI animals to their breeding herds.

The BVD virus exists in cattle worldwide – and can cause severe hardship for ranchers and cattle feeders that experience outbreaks of the disease. Research shows the annual loss in reproductive efficiency alone due to only one PI animal can range from \$14 - \$24 for every cow in the herd.

The main negative health effects of BVD virus is it inhibits conception and causes abortion in susceptible female cattle. The virus suppresses the immune system, making infected animals more susceptible to other diseases. PI animals usually have a very high amount of virus circulating in their blood and they shed virus very efficiently to susceptible animals. The disease has no human health implications and meat from infected cattle is no threat to the beef consumer.

Testing for PI status is an once-in-a-lifetime event. If an animal is PI negative at birth, it will always be negative. If an animal is PI positive at birth, it will always be positive.

Using this knowledge and a relatively inexpensive "pooled" diagnostic approach, testing can cost less than \$2 per head.

Ranchers wanting to participate in the project must apply through Montana State University. For more information about the project, Contact Clint Peck, director of Beef Quality Assurance programs for Montana State University at 406/896-9068 cpeck@montana.edu, or Mo Harbac, 406/994-4323 mharbac@montana.edu or visit the website at www.mtbqa.org.

The project is supported by the Montana Stockgrowers Association and is funded through the Montana Beef Network.

Conservation Compliance

Federal regulations discourage the production of crops on highly erodible cropland unless the land is protected from erosion by an approved conservation system. Status reviews are conducted to ensure producers follow a conservation plan on highly erodible land.

In addition to the highly erodible land, a person may not plant an agricultural commodity on wetlands converted after Dec. 23, 1985, or convert a wetland to make agricultural production possible after Nov. 28, 1990.

Failure to comply with these provisions will cause a person to be ineligible for USDA benefits. County Committees may review noncompliance situations for good faith and provide relief in approved cases.

2008 Managed Grazing Periods

The Farm Service Agency State Committee has approved two 60-day managed grazing periods for Conservation Reserve Program (CRP) acres for 2008.

- Spring managed grazing can occur March 15th – May 14th
- Summer managed grazing can occur July 16th through September 13th

Since only two grazing periods are allowed, producers who can not begin grazing until August 2nd will only be allowed to graze through September 13th.

Dairy Disaster Assistance Program Signup Resumed

The Farm Service Agency (FSA) resumed signup for the Dairy Disaster Assistance Program (DDAP) III on March 5, 2008.

Eligible dairy producers who suffered production losses in 2005, 2006, or 2007 may apply to receive benefits until May 5, 2008 when sign up ends. Production losses must have occurred between Jan. 1, 2005, and Dec. 31, 2007 due to natural disasters.

Contact the local FSA office for detailed eligibility requirements.

Estate Planning Seminar Slated for May 1, 2008

Sponsored by Mandie Reed, MSU Extension
Wheatland County Extension Agent

MSU Extension Family Economics Specialist Marsha Goetting will be offering a workshop in Harlowton on May 1 at 6:00 pm at the Kiwanis Youth Center. Please call Mandie Reed at 632-4728 if you have questions or to save a seat. This is a workshop you will not want to miss.

Dr. Goetting will address the following key elements:

- Making use of PODs & TODs on financial accounts to avoid probate of these assets.
- How to avoid probate on real property with a beneficiary deed.
- The impact of how property is titled determines to who inherits it.
- Considerations when choosing a guardian & conservator for minor children.
- How a will that can control the distribution of assets.
- The implications of dying without a will.
- How to receive a \$100 stipend for completing an estate plan.

Marsha A. Goetting is a Professor and Extension Family Economics Specialist at Montana State University in Bozeman. During the past few years she has presented over 800 workshops reaching over 25,000 Montanans with financial and estate planning information. She has also authored over 75 MontGuides & Bulletins. Dr. Goetting has received national, regional and state awards for her programs. Dr. Goetting received her Bachelors & Masters degrees in Family Economics and Adult Education from Kansas State University and her PhD from Iowa State University.

She has presented many financial workshops in our area over the years, and participants routinely praise her as being both knowledgeable and able to share that knowledge in terms the general public can grasp and utilize. In addition she makes her estate planning presentations interesting for the participants.

Wind Turbines or Oil/Gas Leases

If you have mortgaged your land to FSA approval is required prior to entering into wind turbines or oil/gas leases or development. Failure to obtain prior agency approval could result in loan default. Please check with the office if you are considering any of these options.

Source Water Protection Program

The value of a clean drinking water supply cannot be overestimated. Source water used by communities to provide drinking water can be obtained from streams, rivers, lakes, springs or underground aquifers. Activities nearby, upstream or within a watershed of these types of source waters can pose a threat to the quality of the water. Ensuring these untreated source waters are protected from contamination can reduce the costs of treatment and risks to public health.

The Source Water Protection Program is a program to assist rural and small communities served by public water systems to reduce or eliminate the potential risks to drinking water supplies. The Montana Rural Water Systems will be working with communities to develop a source water protection plan that can be effectively and economically accomplished within each community. Protection of source waters requires an investigation of the issues and a response that creates a system of management. Protection measures are practices to prevent contamination and form the first barrier to drinking water protection.

For further information regarding the project, contact Kristi Kline 406/454-1151 or www.mrws.org.

Changes to Your Farming Operation

To ensure a smooth transition when a new Farm Bill is passed, FSA is encouraging producers to notify us of any changes to your farming operation including land ownership or lease changes, entity changes including members and shares, and who is authorized to sign documents for the operation or individuals. It is anticipated there will be policy changes and new forms to complete when new programs are implemented. Details will be published in this newsletter as they are known.

The Improper Payments Information Act of 2002 (IPEA) implemented stronger internal controls and reviews of payments issued. **The FSA database of payments issued will be compared against the Social Security Administration (SSA) database of deceased individuals.** It is very important that FSA be notified of the death of a landowner, member of an entity, or anyone that may be earning USDA benefits. There are actions that can be taken to ensure payments are issued correctly and not considered an overpayment. Contact your local office for more information.
