

For: State and County Offices

Fruit and Vegetables (FAV) or Wild Rice Queries

Approved by: Acting Deputy Administrator, Farm Programs

1 Overview

A Background

4-CP, paragraph 65, provides:

- queries available for County Offices to use as tools to ensure that the correct FAV and wild rice acreage is used when calculating acre-for-acre reductions for DCP
- instructions for accessing the acre-for-acre reduction queries.

Information Bulletin No. 2830 informed County Offices that FAV and wild rice queries and the procedure for running the queries had been modified to accurately reflect the FAV and wild rice acreage planted on base acres enrolled in DCP.

Additional problems have been identified with the FAV and wild rice queries. Modified queries and procedure for accessing the modified queries were provided in Information Bulletin No. 2866.

4-CP, subparagraph 21 B, provides that when multiple plantings of FAV's are planted on the same acreage the acreage shall only count once with respect to acre-for-acre reductions. The FAV and wild rice queries do **not** exclude FAV multiple planted acreage.

B Purpose

This notice provides County Offices:

- procedure for accessing the modified FAV and wild rice queries
- modified query names and descriptions
- clarification on handling double-cropped FAV acreage with respect to acre-for-acre reductions.

Disposal Date	Distribution
October 1, 2004	State Offices; State Offices relay to County Offices

Notice DCP-102

2 Modified FAV Queries

A Reason for Modification

Queries FAVDET03 and FAVREP03 determined the FAV and wild rice acreage planted on base acres enrolled in DCP. The effective DCP cropland minus base acreage provides the farm's nonbase acreage. If this result is equal to or less than zero, the farm is fully based; therefore, the nonbase acreage is equal to zero. See 4-CP, subparagraph 21 B. The FAV and wild rice queries were not defaulting the nonbase acreage to zero when the farm was fully based. The modified queries listed in subparagraph B will default the nonbase acreage to zero if the base acreage is larger than the effective DCP cropland.

B Modified Query Names and Descriptions

Query FAVDET03 has been replaced by FAVDET3A and FAVDET3B and query FAVREP03 has been replaced by FAVREP3A and FAVREP3B.

This table provides the names and descriptions of the modified queries.

Name	Description
FAVREP3A	Lists farms with reported FAV and wild rice acreage planted on base acres enrolled in DCP and the nonbase acreage is zero or greater than zero.
FAVREP3B	Lists farms with reported FAV and wild rice acreage planted on base acres enrolled in DCP and the nonbase acreage is less than zero.
FAVDET3A	Lists farms with determined FAV and wild rice acreage planted on base acres enrolled in DCP and the nonbase acreage is zero or greater than zero.
FAVDET3B	Lists farms with determined FAV and wild rice acreage planted on base acres enrolled in DCP and the nonbase acreage is less than zero.

Note: Updated query names and descriptions will be provided in a future 4-CP amendment.

Notice DCP-102

2 Modified FAV Queries (Continued)

C Modified Query Procedure

The modified FAV and wild rice queries shall be accessed using the instructions in this table.

Step	Action	Result
1	On Menu FAX07001: <ul style="list-style-type: none">• ENTER "11", "PFC/DCP/Compliance"• PRESS "Enter".	Menu M00000 will be displayed.
2	On Menu M00000: <ul style="list-style-type: none">• on the command line ENTER "FAVQRY3,QRPRADJ1"• PRESS "Enter".	The message, "The Process to Prepare FAV Queries Has Completed. Enter zero to continue.", will be displayed.
3	PRESS "0" to return to Menu M00000.	Menu M00000 will be redisplayed.

Note: Updated procedure for accessing the queries will be provided in a future 4-CP amendment.

3 Multiple FAV's on Same Acreage in Same FY

A Overview

1-DCP, subparagraph 471 C, provides that multiple plantings of any FAV on the same acreage in a FY shall be considered only once for compliance purposes. However, FAV's must be planted on the same acreage.

4-CP, subparagraph 21 B, provides that when multiple plantings of FAV's are planted on the same acreage, the acreage shall only be counted once when applying acre-for-acre reductions to the farm.

B FAV Queries

When a farm has two plantings of a FAV on the same acreage in the same FY, the acreage for both plantings is included in the "Planted Acreage" field in the modified queries. The FAV and wild rice queries count the acreage twice when a farm has multiple plantings of FAV's on the same acreage in the same FY.

Note: FAV and wild rice queries are only to be used as a tool to assist the County Office in determining the number of FAV acres planted on base acres enrolled in DCP.

Notice DCP-102

3 Multiple FAV's on Same Acreage in Same FY (Continued)

C County Office Action

When determining the number of FAV acres planted on base acres enrolled in DCP, the County Office shall:

- manually determine whether the farm has multiple plantings of FAV's on the same acreage in the same FY
- deduct the FAV double-cropped acreage from the FAVREP3A, FAVREP3B, FAVDET3A, or FAVDET3B query results if the farm has multiple plantings of FAV's on the same acreage in the same FY.
