

For: State and County Offices

Dial-Up to the Terminal Access Controller Access Control System (TACACS)

Approved by: Acting Deputy Administrator, Management

1 Overview

A

Background

Many users have encountered problems logging onto the TACACS server in Kansas City and have been forced to attempt log-in 2 or 3 times before a successful connection is made.

KC-ITSTO, Telecommunications Division (TD) has determined that the problem is in the automated script file which will occasionally cause the first several letters of a user ID to be dropped, therefore, making the user unknown to the system.

B

Purpose

This notice provides instructions for replacing the old script file.

<p>Disposal Date</p> <p>January 1, 2003</p>	<p>Distribution</p> <p>State and County Offices; State Offices relay to County Offices</p>

Notice IRM-331

2 Action

A

Replacing the Old Script File

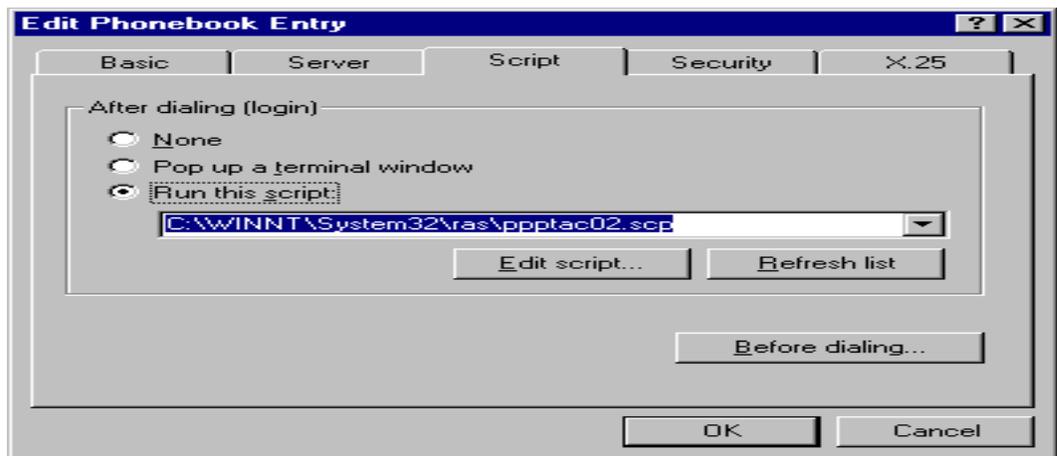

KC-ITSTO, TD has created a new script file to correct the script file problem.

The new script, **PPPTAC02.scp**, replaces the old script file. Download the new script file from the KCC FTP server as follows:

<ftp://ftp.usda.gov/tacacs>.

After the file is downloaded, copy the file to `c:\winnt\system32\ras`.

The user must open Dial-up Networking to edit the properties of the Phonebook entry. The script for the phonebook entry should reflect the use of the `ppptac02.scp` file as follows.
