

USDA Offers Disaster Assistance to Agricultural Producers in Oklahoma Impacted by Wildfire

News Release | Oklahoma | June 02, 2026

Oklahoma

(Stillwater, OK, June 2, 2026) - Agricultural operations in Oklahoma have been significantly impacted by recent wildfires. The U.S. Department of Agriculture (USDA) has technical and financial assistance available to help farmers and livestock producers recover from these adverse weather events. This includes additional signup opportunities for the Farm Service Agency's (FSA) Emergency Conservation Program (ECP), which can assist landowners with financial and technical assistance to remove debris from farmland and materials from collapsed fences and structures on cropland or pastureland. Producers who experienced additional damage, even if they have previously applied, should contact their local USDA Service Center for more information on available assistance for farmland recovery.

"USDA has a suite of programs to support farmers and ranchers as they recover from disasters," said Farm Production and Conservation Under Secretary Richard Fordyce. "I encourage impacted producers to contact their local USDA Service Center to report losses and learn more about program options available to assist in their recovery from crop, land, infrastructure, and livestock losses and damages."

USDA Disaster Assistance

Producers who experience livestock deaths in excess of normal mortality or sell injured livestock at a reduced price may be eligible for the [Livestock Indemnity Program \(LIP\)](#). To participate in LIP, producers will have to provide [acceptable documentation](#) of death losses or evidence of reduced sales resulting from an eligible adverse weather event and must submit a notice of loss to FSA no later than March 1, 2027, for 2026 calendar year losses.

Meanwhile, the [Emergency Assistance for Livestock, Honeybees, and Farm-Raised Fish Program \(ELAP\)](#) provides eligible producers with compensation for feed and grazing losses. ELAP can also help offset the above normal economic impacts of transporting livestock to feed or hauling feed and water to sustain livestock through these disaster conditions. For ELAP, producers are required to submit a notice of loss and application for payment to their local FSA office no later than March 1, 2027, for 2026 calendar year losses.

"Once producers are safely able to determine and report their losses or damages, our local Farm Service Agency staff can help producers with program applications related to wildfire recovery," said Eddie Fields, State Executive Director for FSA in Oklahoma. "As you evaluate losses on your operation, take time to gather important documents you may need to apply for assistance including farm records, herd inventory, receipts and pictures of damages or losses. FSA staff will do their best to work with the loss documentation records you have available."

FSA also offers a variety of direct and guaranteed [farm loans](#), including operating and emergency farm loans, to producers unable to secure commercial financing. Producers in counties with a primary or contiguous disaster designation may be eligible for low interest [emergency loans](#) to help them recover from production and physical losses. Loans can help producers replace essential property, purchase inputs like livestock, equipment, feed and seed, cover family living expenses or refinance farm-related debts and other needs.

Additionally, FSA offers several loan servicing options available for borrowers who are unable to make scheduled payments on their farm loan programs debt to the agency because of reasons beyond their control.

The [Farm Storage Facility Loan Program](#) (FSFL) provides low-interest financing so producers can build, repair, replace or upgrade facilities to store commodities (including hay storage facilities). Loan terms vary from three to 12 years. Producers who incurred damage to or loss of their equipment or infrastructure funded by the FSFL program should contact their insurance agent and their local USDA Service Center. Producers in need of on-farm storage should also contact USDA.

Risk Management

Producers with NAP coverage should report crop damage to their local FSA office and must file a [Notice of Loss \(CCC-576\)](#) within 15 days of the loss becoming apparent, except for hand-harvested crops, which should be reported within 72 hours.

Producers with risk protection through [Federal Crop Insurance](#) should report crop damage to their crop insurance agent within 72 hours of discovering damage and be sure to follow up in writing within 15 days.

"Crop insurance and other USDA risk management options are offered to help producers manage risk because we never know what nature has in store for the future," said Franco Trevino, Director of USDA's Risk Management Agency (RMA) Regional Office that covers Oklahoma. "Disasters can be trying for producers, and they should stay in close contact with their crop insurance agent. Producers can be assured that the Approved Insurance Providers, loss adjusters and agents are experienced and well-trained in handling these types of events."

Conservation?

Outside of the [primary nesting season](#), emergency and non-emergency haying and grazing of [Conservation Reserve Program](#) (CRP) acres may be authorized to provide relief to livestock producers in areas affected by a severe drought or similar natural disasters.

During the primary nesting season, emergency grazing of CRP is authorized at a 50% reduction of normal carrying capacity when a county triggers for LFP due to a qualifying drought. Additionally, non-emergency grazing can also be requested during the primary nesting season. Producers interested in haying or grazing of CRP acres should contact their county FSA office to determine eligibility.

To increase access to forage for wildfire-impacted livestock producers, FSA authorized emergency use of Conservation Reserve Program (CRP) acres for all counties in Arizona, Arkansas, Colorado, Iowa, Kansas, Louisiana, Minnesota, Missouri, Nebraska, New Mexico, Oklahoma, South Dakota, Texas, and Wyoming. CRP participants in these states may donate grazing rights or haying authority to livestock producers affected by wildfire.

Under this authorization, emergency haying and grazing is available until the beginning of the 2027 primary nesting season. There are restrictions on activity during the primary nesting season which varies by state.

Producers should contact their local FSA office to determine eligibility or to donate emergency haying and grazing rights to livestock producers in need of forage access.

FSA's ECP can assist landowners with financial and technical assistance to remove debris from farmland such as woody material, sand, rock and materials from collapsed fences and structures on cropland or pastureland. Through ECP, FSA can provide fence restoration or replacement assistance including livestock cross fences, boundary fences, cattle gates or wildlife exclusion fences on agricultural land.

USDA's Natural Resources Conservation Service (NRCS) is available to provide technical assistance during the recovery process by assisting producers in planning conservation practices on farms, ranches and working forests impacted by natural disasters. The [Environmental Quality Incentives Program](#) (EQIP) can help producers implement conservation practices on land impacted by natural disasters.

"At USDA, we serve as a partner to help landowners with their resiliency and recovery efforts," said Matthew Denton, acting NRCS State Conservationist in Oklahoma. "Our staff will work one-on-one with landowners to make assessments of the damages and develop methods that focus on effective recovery of the land."

Assistance for Communities

Additional NRCS programs include the [Emergency Watershed Protection](#) (EWP) program, which assists local government sponsors with the cost of addressing watershed impairments or hazards such as debris removal and streambank stabilization.

Eligible sponsors include cities, counties, towns or any federally recognized Native American tribe or tribal organization. Sponsors must submit a formal request (by mail or email) to the NRCS state conservationist for assistance within 60 days of the natural disaster occurrence or 60 days from the date when access to the sites become available. For more information, sponsors should contact their

local NRCS office.

In addition to EWP, Conservation Technical Assistance is another valuable service that NRCS can provide following a wildfire. NRCS technical assistance can help fire victims with planning cost-effective post fire restoration practices.

More Information

Additional USDA disaster assistance information can be found on farmers.gov, including USDA resources specifically for producers impacted by wildfire. Those resources include the [Disaster Assistance Discovery Tool](#), [Disaster-at-a-Glance fact sheet](#), [Loan Assistance Tool](#), and [Natural Disasters and Crop Insurance fact sheet](#). Additionally, FarmRaise offers an [FSA educational hub](#) with LIP and ELAP decision tools as well as farm loan resource videos. For FSA and NRCS programs, producers should contact their local USDA Service Center. For assistance with a crop insurance claim, producers and landowners should contact their [crop insurance agent](#).
