

USDA Accepts 2 Million Acres in Offers Through Conservation Reserve Program General Signup

News Release | Kansas | May 04, 2022

Kansas, May 3, 2022 - Agriculture Secretary Tom Vilsack announced the U.S. Department of Agriculture (USDA) is accepting more than 2 million acres in offers from agricultural producers and landowners through the Conservation Reserve Program (CRP) General signup, which included nearly 219,000 acres in Kansas. This is the first of the program's multiple signups occurring in 2022. With about 3.4 million acres expiring this year, Vilsack encourages producers and landowners to consider the Grassland and Continuous signups, both of which are currently open.

"Our conservation programs are voluntary and at the end of the day producers are making market-based decisions.," said Dennis McKinney, FSA State Executive Director in Kansas. "We recognize the Conservation Reserve Program is an important tool to conserve natural resources and this announcement is just the first opportunity for producers to take advantage of the program. Producers are still looking at options under the working lands Grassland Conservation Reserve Program, the more targeted buffer-type practices under Continuous CRP, and partnership opportunities through the Conservation Reserve Enhancement Program (CREP). For farmers who have decided to return land into ag production USDA will be reaching out to ensure they understand options to either prepare the land for production or to transition it to beginning farmers."

Producers submitted re-enrollment offers for just over half of expiring acres, similar to the rate in 2021. Offers for new land under General CRP were considerably lower compared to last year's numbers, with fewer than 400,000 acres being offered this year versus over 700,000 acres offered last year.

It is important to note that submitting and accepting a CRP offer is the start of the process, and producers still need to develop a conservation plan before enrolling their land on October 1, 2022. Each year, during the window between offer acceptance and land enrollment, some producers change their mind and ultimately decide not to enroll some accepted acres without penalty.

The three other types of CRP-Grasslands, Continuous, and CREP-are still available for either working-lands or targeted, often smaller sub-field, offers. Producers have submitted offers on nearly 260,000 acres through the Continuous and CREP signup so far this year. The Grassland signup - which last year had its highest participation ever - closes May 13, 2022.

General CRP Signup

The General CRP Signup 58 ran from Jan. 31 to March 11, 2022.

Through CRP, producers and landowners establish long-term, resource-conserving plant species, such as approved grasses or trees, to control soil erosion, improve soil health and water quality, and enhance wildlife habitat on agricultural land. In addition to the other well-documented benefits, lands enrolled in CRP are playing a key role in climate change mitigation efforts across the country.

In 2021, FSA introduced improvements to the program, which included a new Climate-Smart Practice Incentive to increase carbon sequestration and reduce greenhouse gas emissions. This incentive provides a 3%, 5% or 10% incentive payment based on the predominant vegetation type for the practices enrolled - from grasses to trees to wetland restoration.

More Information

While the General Signup is closed, producers and landowners can still apply for the Continuous and Grassland signups by contacting their local [USDA Service Center](#).

Signed into law in 1985, CRP is one of the largest voluntary private-lands conservation programs in the United States. It was originally intended to primarily control soil erosion and potentially stabilize commodity prices by taking marginal lands out of production. The program has evolved over the years, providing many conservation and economic benefits. Learn more at fsa.usda.gov/crp.

USDA touches the lives of all Americans each day in so many positive ways. Under the Biden-Harris Administration, USDA is transforming America's food system with a greater focus on more resilient local and regional food production, fairer markets for all producers, ensuring access to safe, healthy and nutritious food in all communities, building new markets and streams of income for farmers and producers using climate smart food and forestry practices, making historic investments in infrastructure and clean energy capabilities in rural America, and committing to equity across the Department by removing systemic barriers and building a workforce more representative of America.
